

Local pilot-test activities of pedagogical sequences with gamified activities in Germany, Serbia, Italy, Romania and Cyprus lasted from February to June 2024.

1.

Pedagogical Sequences

The GreenGUARDens team has provided 16 Pedagogical Sequences on Deforestation, Air pollution and Ocean pollution. In addition to resources for educators, the plans contain suggestions for interactive games such as trial simulation, role play, guessing or memory game in order to master the topic in the most interesting way.

2.

On the way to knowledge

By learning through play and with the help of educators, the children managed to master complex topics, investigate phenomena they did not know about before, cooperate with their peers and make decisions, but also become more environmentally conscious and aware of the consequences their actions can have on the planet.

3.

Cooperation with community

Together with the teachers, the children led the cleaning actions, and planted their own small gardens and trees. They visited local parks, forests, ponds and seashores. In their kindergartens children welcomed biologists and recycling experts They visited local environmental organizations and markets. The children were curious, cheerful, motivated to play and learn at the same time.

4.

Changes in the kindergarten

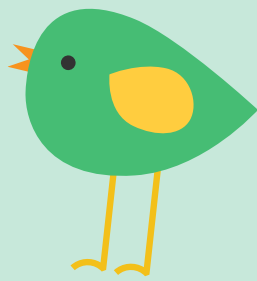

Children have also become more environmentally conscious and responsible - they still maintain their gardens, keep their toys from breaking, recycle everything possible and don't waste water in the kindergarten. And the parents became a part of this process with them, so the children apply all the acquired knowledge at home.
